

Talking on the safe side

Product name

helmet headset, video jacket

Technology

headset integrated into a helmet,
video camera integrated into a jacket

Talking on the phone while wearing a helmet? This is no longer a problem with Texsys GmbH's latest product development: The waterproof helmet headset inlay is characterised by its headset and hands-free profile connecting to the mobile phone via Bluetooth. In addition to the voice dial function, vibration and noise alarm the mobile phone is very easy to operate through the two button control centre near the ear without taking the helmet off.

The helmet inlay is equipped with a Li-Ion polymer battery that lasts for 240 hours standby time and up to 48 hours talking time. The battery can quickly be recharged within two hours by simply plugging it in travel and car chargers.

You can even upgrade such a communication helmet by connecting it to your mp3 player via Bluetooth. The auto switch system stops the music when your phone is ringing: the perfect combination of fun and function while doing snow sports! Texsys GmbH can customise this inlay system for any kind of helmet.

With the Texsys GmbH video jacket system, you can integrate a camera, microphone and volume control into your jacket to create your own movie in full action.
